

# QUESTIONS TO ASK YOUR DOCTOR ABOUT CATARACT SURGERY

**Better vision begins with a conversation.**

Learning about cataracts and your replacement lens options can help you feel confident about cataract surgery. Here are some questions to guide your conversation:

## How is it going to work?

- How long does the surgery usually take?
- What are the risks of cataract surgery?
- What is/isn't covered by my insurance?

## How do I prepare?

- Do I need to stop taking any of my medications before the surgery?
- What do my friends and family need to know to care for me after surgery?

Want to find out how you can correct 2 eye conditions, astigmatism and cataracts, with 1 procedure? Visit [mycataracts.com](https://mycataracts.com) to learn more.

## What happens to my vision?

- Which lens would give me the best vision after surgery?
- If I have other vision issues like astigmatism or presbyopia, is there a lens that can fix those as well as my cataracts?
- Am I a candidate for an astigmatism-correcting lens?
- What about a multifocal lens?

## What happens after cataract surgery?

- Which lens choice reduces my need for glasses or contacts after cataract surgery?
- What sort of activities can I do/should I avoid after surgery?
- How long until I can resume my normal activities? Like driving or exercising?
